

Statement on New Federal Regulations

The Trails Recreation Center supports the Virginia Graeme Baker Pool and Spa Safety Act and the safety of our employees and patrons. An audit by the facility architect has already been completed and a more comprehensive audit of the Trails pools and spa will be completed in early January, 2009 to establish further compliance procedures. We will install any additional compliant parts as soon as they become available from product manufacturers and distributors. Like many other public pools in Colorado, we will continue normal operations as we continue to work diligently to come into compliance with the new requirements. The Trails already employs many anti-entrapment features including larger, unblockable drains, dual-drain systems and an emergency shut off feature. Over the past several months, appropriate personnel have acted in good faith to establish compliance guidelines by attending conferences, seminars and Web casts, and consulting manufacturers, contractors and design firms on these federal requirements. We are confident that our pool facility is safe, and we will continue to work diligently for the safety and enjoyment of our employees and patrons.
